

# **DO YOU TAKE NANDROLONE ("DECA-DURABOLIN")?**

**WATSON PHARMACEUTICALS IS STOPPING PRODUCTION of THIS DRUG in the USA.** Supplies will soon run out at pharmacies. It cannot be imported for personal use because it's an anabolic steroid. There are no good medical alternatives.

**Nandrolone** is an important treatment for men with AIDS-related wasting and weight loss due to chronic illness, as well as an FDA-approved treatment for anemia.

**In March 2007, Watson, the company that makes nandrolone, decided to stop producing the drug,** leaving patients and doctors suddenly without this treatment. Alternatives to the drug are less effective, have many more side effects, and are more expensive.

AIDS activists from around the U.S. are working on a plan to pressure Watson to change their decision. Spread the word. Call the company and your congresspeople.

**If you, or someone you know, use or have used nandrolone in the past, call Watson Pharmaceuticals at (951) 493-5300 or (800) 272-5525, or fax a letter to (973) 355-8301 and demand that they put this widely-used and desperately needed AIDS wasting treatment back on the market.**
